

Mathography

- a. ^{you} will help your teacher get to know you as an individual. The letter should talk about these three general topics: you, you as a student, and you as a math student. Please also **include a picture of yourself on the front page** (it can be in black and white or color).

Remember to use complete sentences and make sure that it is neat enough for your teacher to read it easily (typed in ok, but not required). Start the letter with "Dear..." Make sure you sign your letter. This assignment should take 15 to 20 minutes to complete. Parts (b), (c), and (d) below have suggestions for what to write about each of the three topics.

- b. **You:** Introduce yourself using the name you like to be called. Describe your hobbies, talents, and interests. State your goals or dreams. What are you proud of? What else would you like to share?
- c. **You as a Student:** State the importance of school in your life. Describe yourself as a student. What kinds of classroom activities do you excel at most? What kinds of activities do you find frustrating? Explain which subjects are your favorites. Tell why you like them. How often do you finish in-class assignments? How faithfully do you do your homework?
- d. **You as a Math Student:** Describe your most memorable moment in math and explain why you remember it. State your favorite math topic and name your least favorite. Explain how you feel about math this year.
